

# ■ Java Interview Revision Guide

A quick, visual-friendly and easy-to-understand reference before interviews.

## ■ 1. Reverse a String

■ **Logic:** Logic: Convert the string to a character array and swap characters from both ends moving inward. Alternatively, use the built-in `StringBuilder.reverse()`.

■ **Visual:**

Diagram: [s] h e l l o  $\rightarrow$  swap  $h \leftrightarrow o \rightarrow$  o e l l h  $\rightarrow$  'olleh'

■ **Easy Explanation:** Explanation: You use two pointers (start and end). Keep swapping until they meet in the middle.

## ■ 2. Palindrome Check

■ **Logic:** Logic: Compare characters from start and end of string; if all pairs match  $\rightarrow$  palindrome.

■ **Visual:**

Example: madam  $\rightarrow$  matches  $m \leftrightarrow m$ ,  $a \leftrightarrow a \rightarrow$  palindrome.

■ **Easy Explanation:** Explanation: Two-pointer technique ensures  $O(n)$  time and no extra space.

## ■ 3. Prime Number

■ **Logic:** Logic: Number greater than 1 and divisible only by 1 and itself. Check divisibility up to  $\sqrt{n}$ .

■ **Visual:**

Diagram: For 9  $\rightarrow$  check 2,3  $\rightarrow 9 \% 3 == 0 \rightarrow$  not prime.

■ **Easy Explanation:** Explanation: Checking till  $\sqrt{n}$  avoids redundant checks and improves efficiency.

## ■ 4. Factorial

■ **Logic:** Logic: Multiply numbers from 1 to  $n \rightarrow n!$

■ **Visual:**

Example:  $5! = 1 \times 2 \times 3 \times 4 \times 5 = 120$

■ **Easy Explanation:** Explanation: Iterative approach avoids recursion overhead. Useful in permutations.

## ■ 5. Fibonacci Series

■ **Logic:** Logic: Each term is the sum of the previous two terms.

■ **Visual:**

Example: 0, 1, 1, 2, 3, 5, 8, ...

■ **Easy Explanation:** Explanation: Iterative version avoids recursion overhead and runs in  $O(n)$  time.

## ■ Time Complexity Summary

Algorithm	Time	Space	Stable
Linear Search	$O(n)$	$O(1)$	–
Binary Search	$O(\log n)$	$O(1)$	–
Bubble Sort	$O(n^2)$	$O(1)$	Yes
Selection Sort	$O(n^2)$	$O(1)$	No
Insertion Sort	$O(n^2)$	$O(1)$	Yes
Merge Sort	$O(n \log n)$	$O(n)$	Yes
Quick Sort	$O(n \log n)$	$O(\log n)$	No
